VEGA Media Analyzer

In-depth Media Analyzers

VEGA is an industry leading media analysis platform for debugging, verification of standards compliance, and interoperability testing of encoded streams. VEGA enables navigation down to the deepest levels of a media file to generate error reports and analysis.This significantly reduces R&D and QA time in delivering standards-compliant video. VEGA supports all popular video compression and container standards and includes features such as video comparison and quality checks. These features help deliver high-quality media.

VEGA Usage Model

- *Frame by frame analysis, error identification and reports for audio video elementary streams*
- *Analysis of the stream structure through syntax elements from the high level to the block level*
- *Powerful reporting of overflow/underflow in TSTD and CPB model*
- *Analysis of information from the high level to the block level graphically like bitrate, frame distribution, compression ratio, QP etc.*
- *Detailed analysis of statistics at different levels like stream, sequence, NAL, frame etc.*
- *PCR inaccuracy and intervals, PCR drift rate, PCR frequency offset analysis*
- *Integrated player to test bitrate switching and video quality errors*
